

PMA INDIVIDUAL AWARDS

1. PMA AWARD FOR CONTRIBUTION TO MODERN MEDICINE (initiated by Past President Modesto O. Llamas, MD)

(One awardee only)

Advances in Medicine in this country did not come easy. It required the enterprising and courageous efforts of our colleagues amid uncertainties, to venture on and introduce newly acquired knowledge, modalities and innovations. Without them, medicine in this country would not have been as advanced as it is today.

For these efforts which have gone unrecognized, however late it may be, PMA would like to accord them that due recognitions.

The criteria for the awards are as follows:

1. Significance or contribution to health outcomes	25%

6. PMA AWARD FOR THE MOST OUTSTANDING PHYSICIAN WITH ENVIRONMENTAL AND SANITATION PROJECT/S FOR THE COMPONENT SOCIETY (initiated by Past President Nenita C. Lee Tan, MD)

(One awardee only)

This award was initiated by Dr. Nenita C. Lee Tan to address one of the most prevalent problems in the country today. As the recognized organization in the country, it is but proper to raise standards of health education and services in the country through its component societies' members by making the community aware of proper environmental and hygienic procedures that are vital for the reduction of the prevalence of the common infectious diseases and to increase the compliance of environmental, health and hygienic habits to every individual. The qualifications are:

1. To qualify for this award, the individual should be a member of good standing of the component society
2. He must also be endorsed by the Board of the component society
3. He should have projects that contributed to the environmental protection, sanitation and hygiene of the component society and the community where he belongs.

The criteria for the award are as follows:

1. Relevance	35%
- promoted knowledge consistent to the environmental protection and sanitation project	
2. Impact/Significance	20%
- effected sustainable behavioral change in people in his community/area and /or minimize effect of climate change on health	
3. Innovation/Creativity	20%
- applied new concepts or breakthrough approach	
4. Community Mobilization	25%
- elicited participation from community members	
TOTAL	100%

7. Kalusugan at Kaunlaran ng mga Katutubo Award

(Kultura, Komunikasyon at Katutubong Wika para sa Pagpapalaganap ng Karunungan Pangkalusugan) **(KKK)**

- *A health literacy, community upliftment and development program for the indigenous communities*
 - *for physicians who have dedicated their lifework to the care of indigenous communities)*
- (initiated by Prof. Maria Minerva Patawaran-Calimag)**

Definition:

Health Literacy - is the degree to which individuals have the capacity to obtain, comprehend, utilize and process basic health information and services needed to make appropriate health decisions across the three (3) domains of the health continuum: Health care, disease prevention, and health promotion.

Goal: Provide an affirmative, easily accessible, and concrete educational and community-based programs designed to improve the health status and quality of life of the indigenous communities.

Keywords: Sustainable, long term, simple, patient-centered, partnership/collaboration, community empowerment, preventive and promotive health, Universal Health Care

Objectives:

Programs and Projects targeted towards indigenous communities are intended to:

1. Improve access to healthcare: The project should aim to increase the availability and accessibility of healthcare services specifically tailored to address the health concerns of indigenous communities.
2. Raise awareness about preventive care: The project should focus on educating indigenous communities about preventive healthcare measures and practices. This includes raising awareness about the importance of regular check-ups, vaccinations, and hygiene practices to prevent the spread of diseases and improve overall health.
3. Address specific health challenges: Indigenous communities often face unique health challenges that require tailored interventions. The project should identify and address these challenges, such as addressing specific diseases prevalent in indigenous communities, addressing environmental health concerns, and addressing mental health issues arising from cultural, social, or historical factors.
4. Empowering community members: The project should aim to empower indigenous community members to take charge of their own health. This can be achieved through capacity-building initiatives, such as training community health workers, providing health education materials in local languages, and involving community members in decision-making processes related to healthcare.
5. Foster cultural sensitivity and respect: The project should prioritize cultural sensitivity and respect for indigenous cultures and practices. This includes involving indigenous

community leaders and traditional healers in the project's planning and implementation, incorporating traditional healing practices into healthcare services, and ensuring that healthcare providers are trained to respect and understand indigenous cultural norms and beliefs.

6. Enhance collaboration and partnerships: The project should foster collaboration between indigenous communities, healthcare providers, government agencies, and non-governmental organizations. This collaboration can facilitate information sharing, resource pooling, and coordinated efforts to address the health concerns of indigenous communities effectively.

7. Monitor and evaluate impact: The project should establish monitoring and evaluation mechanisms to assess the impact of interventions on the health outcomes of indigenous communities. Regular evaluation allows for identifying successes, areas for improvement, and adjusting strategies accordingly to ensure the project's effectiveness and sustainability.
